

FarmHub

Communications Gateway

The FarmHub Communications Gateway functions as the central communications device for farm data collection and transmission. The cloud communications enables a variety of options for transmission and consolidation of the collected data.

- **Unit is capable of communicating with many devices, then sending that information securely to cloud-based systems, such as the FarmStreams Portal.**
- **Communications to the cloud is done via:**
 - 4G Modem
 - Ethernet connection
- **Unit uses wireless communications to a number of different devices:**
 - MultiSense Plus
 - Animal Scale
